

SITE SECTION

METHOD OF WORKING

SITE COMPOUND

The site compound is to be placed on the garden of plot 1 while plots are being built. The roadway is to be constructed prior to construction using geomembrane then type 1 hardcore compacted down. This will offer good access into the site for all traffic and will resist the transfer of mud and debris out onto the highway (although this needs to be checked for all vehicles and the necessary cleaning items need to be available so to negate this). The compound will consist of a covered area for reading plans etc., self contained chemical toilet and a secure lockup for materials.

MATERIALS & DELIVERIES

Most material deliveries to site will be using a smaller rigid back lorry, truck or van, although there may be the odd delivery by a larger articulated lorry (this may need to be off loaded on the roadside). By adopting this method deliveries can be properly managed, meaning that few articulated lorries will be visiting this small village site at all times of the day, instead most deliveries will be delivered between 10 to 11.30am or 1.30 to 3pm. These times miss the high volumes of traffic during the day and also miss in and out School times.
There will be a small lockup on site to hold some materials.
Another exception to the delivery rule stated above will be for concrete deliveries that come on specialised lorries. Due to volumes that may need to be poured or being in a queue with the concrete company delivery of concrete may very well fall outside of these times.

WORKING HOURS

Working hours to be Monday to Friday 7.30am to 5pm and Saturday 8am to 12pm.

PROPOSED RESIDENTIAL DEVELOPMENT

DO NOT SCALE FROM THIS DRAWING
This and the ideas incorporated within it are the property of Julian Warrick Architectural Design Consultant and may not be used or disclosed except with our prior written consent. The contractor is to check all dimensions on site before any work is put in hand and any discrepancies are to be reported to the architect before any work is put in hand. Figured dimensions are to be taken in preference to scaled dimensions. The drawing is to be read in conjunction with all relevant engineers and specialists drawings and specifications. Any discrepancies are to be reported to the architect before any work is put in hand. Materials and workmanship are to be in accordance with British Standard Specifications and Codes of Practice. The contractor is responsible for obtaining all necessary approvals and consents for the works. Any proposed variations from the approved drawings must be submitted to the architect for approval before any work is put in hand. The contractor is responsible for ensuring that adequate temporary bracing and propping is provided to maintain the stability of the structure during construction. The contractor is responsible for the health and safety of all persons on the site during construction. The works are deemed to include all temporary and permanent measures required to comply with the Construction (Design and Management) Regulations 2015. The contractor is responsible for providing adequate insurance cover for the works, for the public and for employees. Copyright and Intellectual Property Rights are asserted over this drawing and design. Any unauthorised reproduction or use of the drawing and design is prohibited.
PLANNING APPROVAL
The planning drawings are not to be used for construction purposes until they have been approved by the Local Authority Building Control Department and all conditions have been discharged. Any changes to the approved drawings must be submitted to the Local Authority Planning Department for approval before any work is put in hand. Figured dimensions are to be taken in preference to scaled dimensions. Any discrepancies are to be reported to the architect before any work is put in hand. Materials and workmanship are to be in accordance with British Standard Specifications and Codes of Practice.
