

External bird boxes will be fitted onto the proposed development to increase the diversity of breeding birds on site. Recommended bird boxes are available from NHBS. A range of boxes, incorporating a variety of entrance sizes are recommended to encourage a broad diversity of bird species. Including a range of hole sizes from 25mm, 28mm and 32mm, are recommended to provide nesting space for a range of bird species. The bird boxes are made from FSC certified European redwood, and are designed to mimic natural conditions and maintain a stable internal environment. Two hole sizes are available (25mm and 32mm) and both measure 140mm x 180mm x 260mm. Species-specific boxes including wagtail, straling, robin and sparrow boxes are also available. Products made from wood-crete are not recommended due to the unsustainable nature of this material.

Twelve of these bird boxes will be installed on the south-eastern, south and south-western aspects of the new properties as part of the proposed works, for additional warmth throughout the day, and placed at a height of 3m.

Species-specific bird box dimensions:

Sparrow terrace:
305mm x 410mm x 150mm
Wagtail:
195mm x 170mm x 310mm
Robin:
318mm x 156mm x 175mm
Starling:
510mm x 160mm x 180mm
