Today's technology meets yesterday's craftsmanship

The unique Bygone Collection of PVC-u sliding sash windows are unprecedented with their strong resemblence to their timber predecessors.

Sculptured ovolo sashes create soft lines and eliminate the harshness of normal PVC. The extra deep bottom rail gives an authentic look to the window.

Tilt restrictors are fitted as standard (subject to size). Every window has brass effect scroll handles and a pole eye to the top of the sash together with key locking cam catches.

Decorative horns are available externally whilst the 'real feel' surface mounted glazing bars recreate the small pane effect.

A third seal on the frame gives supreme quality and superior torso balances, guaranteed for 50,000 cycles offers the best possible performance

Internally the additional decorative trim provides a fourth seal to the lower sash, giving the true feel of a box sash window whilst still allowing the sash to be tilted for easy cleaning.

Many double glazing companies do not offer PVC-u sash windows because of the extra care and accuracy the windows take to produce and install.

Masterframe Windows only supply the Bygone Collection to their **Preferred Installers**, all of whom are experienced in the installation of sliding sash windows.
