

In regard to the extension at 44 south street Crowland

The extension was done in matching brick and using standard construction methods . The existing property that has stood on the site for over 50 years , the new wrap round extension has only gone to the 2.5 m (height of flat roof) allowed as not to impose on the existing bungalow and surroundings , it has white upvc fascias as to match existing property and a white aluminium bi fold and white upvc door and side panel to match existing and be in keeping

There are no windows on the side and rear as not to impose on the side neighbours and the property that is due to be built to the rear of 44 south street

A white roof lantern has been used to allow natural light into the extension

Every effort has been made to keep this in keeping with surroundings and the existing bungalow
