Proposal 3: Courtyard Gates

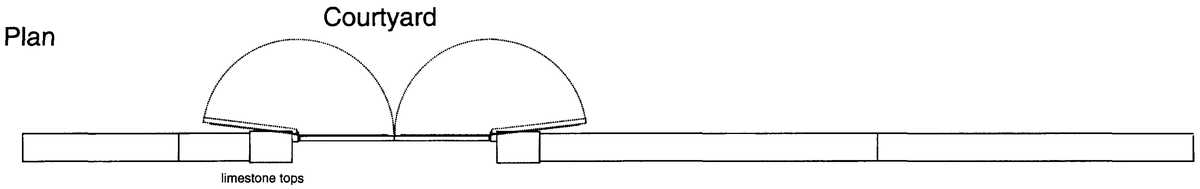

widened gate opening

East Street

Proposal
To widen existing gate to courtyard adjacent to East Street in external edwardian brick wall. Existing FLB pine gate replaced with wider pine FLB gate. Brick pillar the width and height and same reclaimed bricks of existing wall.

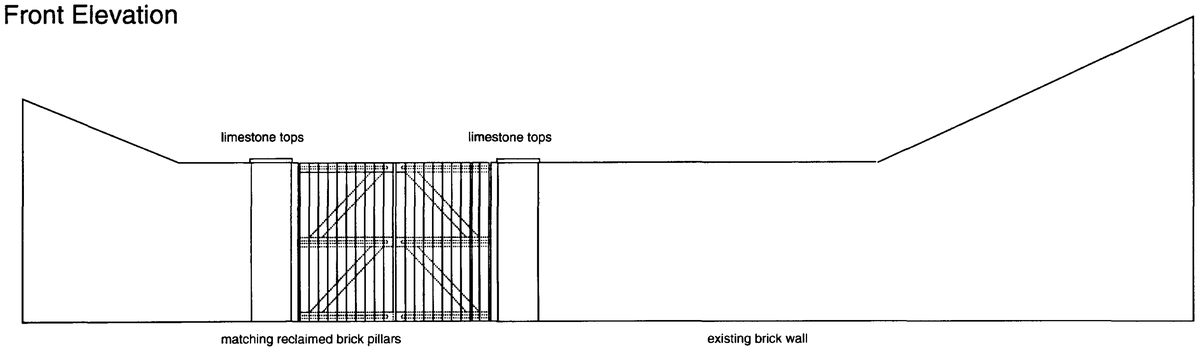

The Manor House has in recent years had most of its land sold off to developers. Wider gates to the courtyard will restore a proper entrance to the property in keeping with its size and significance. The gates will also improve access to the courtyard and help make it a focal point of the building - underlining the possible communal use of this part of the property as craft studios and display areas. Gates will also allow the relatively inexpensive improvement of the condition of the main courtyard wall which is in a very poor state of repair. The appearance of the front of the building and a substantial part of East Street will be considerably improved.
