Shop front viewed from Market Place

Proposed dish position at side of building

Shop front

The dish faces and receives a signal from a direction of 10° East.

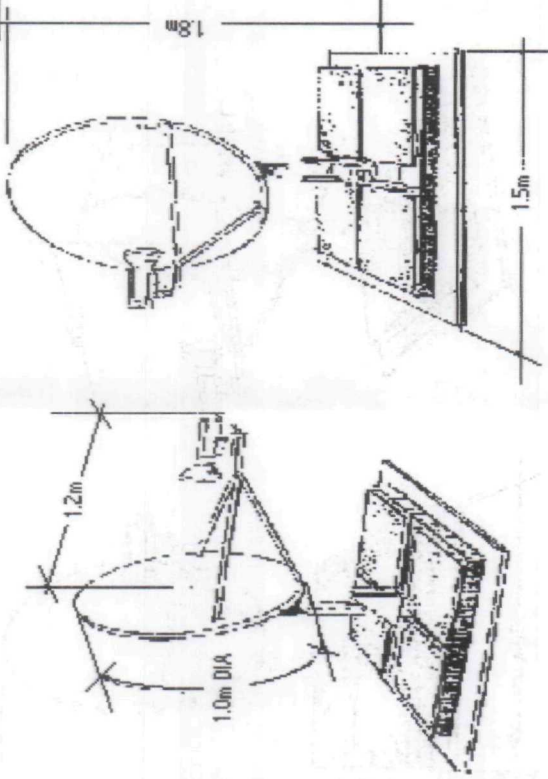

A Typical 1.0m DIA Satellite Antenna – NPR Mounted.

The dish has been superimposed to highlight the effect of the installed site.

Proposed dish position on flat roof at side of shop

The dish will be fixed to a Non Penetrating Roof mount, causing no damage to the waterproof covering or the roof structure. Also allowing the minimum of height for the dish to be placed in the position of best reception, this would ensure that the dish does not become too visibly intrusive to the neighbouring private residence.

AN EXAMPLE:
Previously installed NPR mount and dish.
