It appears from the May 2026 supporting letter, along with the amended site layout (which shows no lighting) and elevation plans, that lighting across the site will be minimal. The primary sources of light would be vehicle headlights and 1-2 external lights fitted to the front elevation of each hut, which are angled downwards. As such, any impact on the setting of heritage assets from lighting should be limited, and my previous concerns have been addressed. I therefore have no objection.
