REPORT

PROJECT: PROPOSED OUTSIDE MÉNAGE

SITE: LAND WEST OF 'FENSEVER' FURTHER OLD GATE, HOLBEACH, SPALDING, LINCOLNSHIRE, PE12 8QE.

CLIENT: MS S MUNN

The above proposal is shown on our drawing as attached. The outdoor area is for private personal use only by the applicant and their family.

Work at the site are to be carried out as follows: Removal (reduced dig) of soil to allow for sub-base hardcore and French drains. Removed soil to be used for bringing up low spots on the field to a more level surface.

Excavate and install grid drainage system with outfall into shallow grip, lower level on two sides of new Arena, (see plan). Use 100mm perforated pipes, bedded on and shrouded in 150mm free flowing gravel.

150mm clean type 1 rolled and compacted, laid on suitable fleece stabiliser sheeting with 75mm well rolled best graded sand.

Finally use re-cycled rubber, suitably sourced and free from all sharps as top dressing to the Arena. Retain using 200mm treated timber gravel boards or durable long life plastic boards for longevity.

WASTE
Horse manure to be contained in a towable cart and removed from the site by a local Farmer for treating of land. In turn opening up the soil and breaking down for better crop yield.
Smaller bags are put up at the entrance gate of the site for free collection to local garden enthusiasts, which is proving popular and the Client has several regulars that collect bags frequently.
