Flood Risk for X:535294, Y:324755

Be prepared

The information below provides an indication of the likelihood of flooding in your area. This information comes from the Environment Agency's Flood Risk Assessment, which uses ground levels, predicted flood levels, information on flood defences, and our local knowledge. The likelihood is described in one of three categories, low, moderate or significant, as used by the insurance industry.

The Environment Agency has provided this information to the financial services industry, as required by Government to ensure that as many people in flood risk areas are able to access flood insurance for their home. For more information, follow the link to **Flood risk and home insurance** on the left of the page.

What is the likelihood of flooding from rivers or the sea in my area?

View current flood warnings in this area

What does 'low' mean for me?

The location you have selected is in an area that is unlikely to flood except in extreme conditions. The chance of flooding each year is 0.5% (1 in 200) or less. This takes into account the effect of any flood defences that may be in this area, whether or not these are currently illustrated on the Flood Map.
