TILT & TURN WINDOWS

INTRODUCTION

Tilt & Turn windows from Synseal are designed to give secure ventilation and versatile operation in commercial and certain domestic operations. Their sophisticated ironmongery provides excellent durability, with a high level of security, and easy cleaning of exterior glass surfaces.

Two versions are available:
(1) Tilt first, then turn windows are recommended for multi-storey use, particularly where children could be in the building. On operating the handle, the window opens into the secure ventilation position, with the vent tilted inwards at the top. In this position, the window is child safe.

Turning the handle again, places the window in the turn mode - with the vent free to swing fully open into the building for glass cleaning.

(2) Turn first, then tilt windows open fully for glass cleaning first, and then move into the secure ventilation position second.

Both types are made in a choice of white or mahogany woodgrain PVC-U, and can be combined with direct glazed lights if required.
