Name Sue Armour
Address Environmental Protection Officer South Holland District Council

Date Submitted 12-09-18
For/Against Comments

I have partially reviewed the ground investigation reported dated May 2018 and am unable to recommend discharge of the land contamination condition at the current time. Once I have all of the information, then I will be able to comment on the report as a whole. Please could the following be submitted?
Additional ground gas monitoring results as discussed in the report.
Is there any further information regarding the tanks located on site on the historical mapping or on the site sensitivity map? No mention is made of the tanks or their contents in the conceptual model. Did any of the trial pits target the tank locations?
I look forward to receipt of this further information and can comment fully at that time.
