Shrubs to BS 3936 to be planted in debris and weed free topsoil 30 cms deep. Topsoil to BS 3882. Any heavily compacted and panned ground to be deep ripped to relieve the compaction. All beds to be accurately cut with even curves and straight lines as appropriate. Allow for 75 mm of Contract Ornamental bark mulch to all planting beds. Industrial grade large stringy bark will be deemed unacceptable. Plants to be good quality bushy stock commensurate with the stipulated pot size.

Hedging plants

Hedging plants are to be from a single source to ensure uniformity of stock. Hedge planting should be set out accurately in respect of alignment and spacing. Ornamental hedges of Ligustrum within the visibility splays of drives (2 metre x 2 metre) are to be maintained at 600 mm maximum height.

In areas where the hedges are close to the dwelling, There is to be a tanalised timber edge to contain the 8-3 mm locally sourced pea shingle. This is to avoid very narrow strips of grass which would be difficult to mow and maintain.

Native Hedging indicated to the western boundary

30% Crataegus monogyna.....	60-90 cms.	52 no
5% Euonymus europaeus.....	60-90 cms.....	8 no
10% Cornus sanguinea.....	60-90 cms.....	17 no
20% Corylus avellana.....	60-90 cms.....	35 no

10% Viburnum opulus.....	60-90 cms.....	17 no
10% Acer campestre.....	60-90 cms.....	17 no
5% Ligustrum vulgare.....	60-90 cms.....	8 no

Native transplants at 0.3 metre centres in random species groups. Trench planted with sufficient depth to allow for the full depth of the root system to be accommodated. ! no spiral guard and cane to each plant and a cut length of shelter guard and cane to Ilex.

Native Edge Mix areas within the Public Open Spaces 1 & 2.

A species rich mix of native transplants at staggered centres to create a diverse habitat for wildlife. Within this area there are to be collected log piles for hedgehog refuges and Insect houses (3 no) sourced from NHBS at Totnes, Devon.

Transplants (except for Pot Grown Ilex) to be set out accurately to the matrix shown and each plant to have Acorn type Shrub shelters with support canes. Ilex to have cut lengths of Shelterguard with a supporting cane. Outer edges to be defined with post and 3 strand wire fencing to assist establishment. A shade tolerant wild flower Emortsgate EH1mix is to be sown within the matrix to give a floriferous understorey. EH1 has 20 flower species and 7 grass species. This area is to be maintained over time and assessed and thinned on a five year cycle. Any shrub shelters not functioning over time to be removed. Malus sylvestris and Victoria Plum are to be on a short stake and with a durable rubber tie.

Orchard trees within the Native mix indicated by larger diameter dots within matrix.

Trees to be set out as indicated on plan.

Trees to be pit planted with a short stake and mycorrhizal fungal spores added to the root areas during the planting process and to be well watered. There is to be a perimeter protective post and 3 strand wire fence with an access gate for

maintenance.

The native edge mix areas are to be undersown with the

Emorsgate EH1 Shade tolerant wild flower and grass mix at 4 g/ m².

TREES TO DEVELOPMENT and P.O.S areas

Reference	Species	Girth	Quantity
Acere	Acer campestre Elegant	12-14 cms	7 no
Acerlin	Acer campestre Lineco	12-14 cms	2 no
Betalb	Betula albosinensis fascination	12-14 cms	1 no

Tilcr	Tilia cordata Redspire	14-16 cms	11 no
Tiltb	Tilia tomentosa Brabant	14-16 cms	5 no

Trees to be staked and tied using 75 mm peeled larch stakes 2.1 m long 600 mm into

ground. and durable rubber ties. TRIPLE STAKED TREES to have 3 no peeled larch stakes

2.1 metres long, 600 mm into the ground. Trees triangulated using 3 no 500 mm long x 75 mm x 25 mm tannalised timber spacer bars nailed to top of stakes with galvanised clout nails. Tree held in place centrally using durable rubber ties. Base of triple staked trees to be have a 1 metre diameter circle of grass free topsoil which is to be mulched and maintained weed free. The triple staking is to reduce the possibility of damage sustained by mowers and strimmers ensuring the long term health of the tree.

Single or double staking in these circumstances is deemed to be unacceptable.

Tree pits are to be 1000 mm x 1000mm x the depth of the rootball plus 200 mm deep with layered backfill containing the recommended quantity of mycorrhizal fungal spores.

Trees to be planted at the same level relative to the soil level as the original planting level.

Trees are to be well watered at planting time and during times of low rainfall. Existing trees to be protected in accordance with BS 5837 for the duration of the construction process.

Care is to be taken to confirm the location of drainage runs /easements and for tree planting to avoid these circumstances.

Grass mixes

As indicated on plan there is to be an Emorsgate EL1 flowering grass mix throughout the main P.O.S areas. These areas are to be sown at 4 g/m.

Emorsgate EH1 is to be sown under the Native edge mix areas at 4 g/m²

The establishment and subsequent aftercare in the Emorsgate areas is to be in accordance with the Emorsgate recommendations at www.wildseed.com. It is especially important to

remove any annual weeds by mowing at the intervals suggested suggested.

Emorsgate EM8 is to be used within swales.

Soil should be low fertility to encourage the growth of flowers over the stronger grasses.

There are to be a small areas of uncut grass within Open Space areas with bulbs of

Narcissus pseudo narcissus, a total of 1750. These areas are indicated on plan.

Front gardens are to to be turfed using good quality meadow turf which is to be laid on

150mm topsoil to BS 3882 raked to a tilth with all stones and deleterious materials

removed.
