

TG is the abbreviation for tongue and groove which refers to the interlocking edge of the boards. TG&V refers to the v-joint of the finished profile once two boards are inter-locked.

Tongue and groove cladding is one of the most versatile profile types available because of its wide range of uses including gates, garden screens, fencing and cladding.

The interlocking nature of tongue and groove boards make them easy to fit and weatherproof.

A notable downside of tongue and groove cladding is the difficulty of removing or replacing boards once in place.

Technical information

PROFILE NAME	TG&V
WOODS	BRITISH CEDAR CANADIAN CEDAR
FINISH	MACHINED
APPEARANCE	TRADITIONAL / MODERN
ORIENTATION	VERTICAL, HORIZONTAL & DIAGONAL
DEPTHS	18MM A DISCOUNTED 14MM OPTION IS AVAILABLE ON REQUEST
WIDTHS	90MM OR 140MM
LENGTHS	1.8M – 4.8M
PROFILES	10MM
