As a result, the authors offer a number of key findings and recommendations for future research. First, the authors note that the literature on the relationship between organizational trust and organizational performance is inconsistent. They argue that this is due to a number of factors, including the lack of a clear definition of trust, the lack of a clear operationalization of trust, and the lack of a clear measurement of trust. They recommend that future research should focus on developing a clear definition of trust, a clear operationalization of trust, and a clear measurement of trust.
