

Quality Through Time And Experience

REHAU, one of Europe's leading polymer producers, has been manufacturing profiles for PVC-U windows for over 40 years. No other European window systems manufacturer has anything like the breadth of experience. REHAU's expertise in the field of window design and PVC-U technology comes from manufacturing a vast range of polymer products, from car bumpers to artificial heart valves.

Fully Certificated For Peace Of Mind

In addition to in-house tests, all REHAU systems are tested by independent bodies such as the British Standards Institute (BSI) and the British Board of Agrément (BBA). Quality control is paramount with all factories operating to EN ISO 9001 (formerly BS 5750).

Reinforcement

Windows will be reinforced with galvanised steel where either size or location makes this a requirement.

Trickle Ventilation

Permanent ventilation can be achieved, without compromising security, by fitting a trickle vent into the frame; ideal for bedrooms or bathrooms where water vapour needs to be dissipated quickly.
