21. Site Area

What is the site area?

5,715.00

sq.metres

22. Industrial or Commercial Processes and Machinery

Please describe the activities and processes which would be carried out on the site and the end products including plant, ventilation or air conditioning. Please include the type of machinery which may be installed on site:

Grain to be dried and potatoes to be conditioned will be ventilated by axial flow fans housed in an internal enclosure which is not directly connected to the exterior of the building. The high level intake to the fan intake and the enclosure itself will be lined with acoustic material. All linings will be from 125mm acoustic grade glass/rockwool fibre. The nearest receptor is a residential property approx. 110 meters south west of the fan intake. With this level of attenuation it is expected that the fan sound level will be acceptable in the context of occasional operation during the crop drying season with proper consideration being given to the fact that the fans will operate during the night. The level would unlikely exceed 35dB.

The existing hooped building will be released for more specialised grading and bagging machinery use and for the secure storage of expensive agricultural machinery.
