WASTE AND RECYCLING MANAGEMENT PLAN
6 West Street, Long Sutton, Spalding, PE12 9BN
Pursuant to Planning Permission H11-0095-22

This Waste and Recycling Management Plan is prepared on behalf of Domino's Pizza UK & Ireland Ltd and will be implemented at the new hot food takeaway approved through planning permission H11-0095-22, approved on 18th March 2022.

The content of this document has been prepared and submitted in accordance with the requirements of Condition 7 pursuant to planning permission H11-0095-22, which reads as follows:

"Prior to commencement of the use hereby permitted, there shall have been submitted to and approved in writing by the Local Planning Authority a detailed scheme to control litter and minimise waste. The scheme shall provide details of packaging to be used, litter bin facilities to be provided and signage on the premises advising customers to dispose of litter appropriately. The measures as approved shall be retained and maintained thereafter.

Reason: To help discourage litter, in the interest of the amenities of the locality. This Condition is imposed in accordance with Policies 2, 3 and 30 of the South East Lincolnshire Local Plan, 2019".

As a business Domino's adopts an operational model which maintains a long-term commitment to maximise opportunities for recycling and striving to achieve a target of sending zero waste to landfill. This includes the provision of 100% recyclable pizza boxes which are themselves made from 80% recyclable material, and the removal of plastic carrier bags from all stores.

According to the company's latest figures on average of 75% of waste produced by Domino's stores are currently being recycled. This has been achieved by implementing a number of standardised measures which all stores (including that which this plan relates to) are required to accord with which includes the following:

- Non-recyclable waste will be bagged and stored in a 1000 litre Euro Bin which shall be kept within the designated storage area to the rear of the building;

- All food waste will be stored in another 1000 litre Euro Bin and for the purposes of health and safety will be situated within the yard at the rear of the building;

- Recyclable waste will be sorted at the point of disposal and stored separately to non-recyclable waste, and as above will be situated within the designated area at the rear of the building; and

- Signage dedicated to highlighting the importance of recycling and disposing of rubbish in an appropriate manner will be erected within the store's waiting room for the purposes of raising awareness to local customers.

Bin collections will be made on a weekly basis. However, with an opportunity to increase the frequency should the need arise which will be subject to operational reviews. No matter what time the collections are made, bagged waste and recycling (to be collected for separate processing) will be brought to the kerb no more than 30 minutes prior to the scheduled collection time.

Staff will inspect the area immediately around the site for litter as part of the closing procedure. This will cover the servicing yard to the rear of the store, the associated point of access along the western elevation and the pavement immediate pavement immediately outside of no. 6 West Street.

This approach is proportionate to the permitted pizza operation as the nature of the produce and style of the operation does not create a significant amount of litter. This is due to the fact that the pizzas and associated items tend to either be delivered or collected by customers for consumption at home/ elsewhere and not on the street outside the premises.

This plan will be retained on site and included within induction packs for all staff. The plan will be kept under review in case of significant alterations to the site's circumstances or operation, and any material amendment will be communicated to the Local Planning Authority.
