DO NOT SCALE FROM THIS DRAWING

Two weeks after the intervention, the students completed a self-report questionnaire. The questionnaire was identical to the one that was administered at baseline. The questionnaire was administered to the students in the same classroom in which the intervention was conducted. The data were entered into a computer database and analyzed using SPSS 16.0 for Windows. The data were analyzed using a two-tailed *t*-test to compare the mean scores at baseline and post-intervention. The results are presented in Table 1.
