

Proposed Materials for paving:

Kandla Grey Indian sandstone slabs, similar in colour to York stone and already used in the garden as the base of the gazebo, also the matching Kandla Grey Sandstone Setts. See images below.

Gazebo

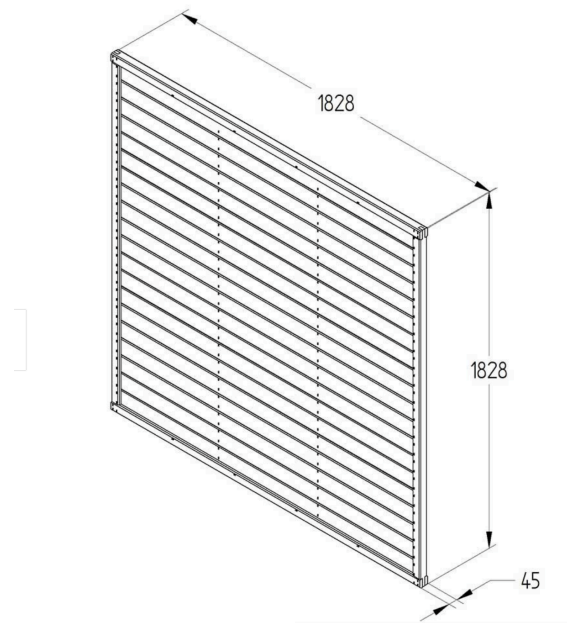

Proposed Boundary Treatment:

Where the new brick wall as detailed on original plan A0 (copy attached) finishes the remaining existing 1.4m concrete post and chain link fencing will be replaced with new 1830mm (6ft) Forest Horizontal Tongue and Groove Fence Panels set in concrete posts on 300mm concrete gravel boards following the existing fence line (in front of the existing overgrown hedging marking our boundary). The fence panels to be painted in a Dark oak stain to match the stables and shed. This tongue and groove design reduces the road traffic noise from the A17.

The final height of the fencing will not exceed 2.1m as stated on plan A0 (following height of remaining original brick wall). There will be no increase/raising of existing ground levels.

The remaining overgrown hedgerow (approx. 6m+ tall) will be crown lifted above the fence height and any additional plants needed will be beech and/or hornbeam as they are native and ensure good screening all year round (min height 3m).

Fence panel design:

Proposed materials for brickwork:

The bricks will be a mixture of new handmade and reclaimed bricks to match those currently used in the remaining original boundary wall.
