SPRING TOYS

Specially designed to appeal to younger children, these toys have flexible spiral spring bases which follow the movements of the child and help stimulate functions such as balance and co-ordination.

ROCKING TOYS

The good old rocking horse is still as popular as ever.

Our modern version incorporates a gentle rocking mechanism which eliminates the risk of uncontrolled recoils.

The mechanism is sensitive enough to be set in motion by a small child, yet strong enough to support even an adult.

All joints have double-sealed roller bearings, and the rocking mechanism is completely enclosed to prevent any risk of trapped fingers or toes.
