

SPECIFICATION NOTES - REFER ALSO TO THE TENDER DOCUMENT.

1.0 Setting out

1.1 Planting shall be set out exactly as shown on the drawing, and measured from existing fixed points. Curved beds shall be set out using steel rollers on the ground using two parallel stakes and a line between, or with site marker paint. The junction between corners and corners shall be cut to form a smooth notched flowing line. Check that all setting out conforms to the plan before calibration and planting works are carried out. Failure to do so may result in rejection of the work by the landscape architect and may require amendment at the contractor's expense.

1.2 All planting beds shall be a minimum of 1 metre wide, except where there is insufficient space due to the constraints of walls and path edges and their foundations. With narrow beds between walls, fences and path edges, ensure that the bed has space free from concrete before planting. If the bed is wider than the concrete, then the landscape contractor shall control the day watering or landscape architect to determine if watering is excessive and can be reduced or, if not, the bed can be paved. The width of all beds will be checked by the responsible landscape architect and where the width is not as shown, the contractor shall re-cultivate them to the specified width at his own expense.

2.0 Ground preparation

2.1 Pre-planting herbicide application - Apply by suitable spraying operation, an approved translocated systemic herbicide to the manufacturer's instructions and to 1997 Control of Pesticides Regulations and 2003 COSHH regulations on all areas except those on both sides of the road and are to receive aggressive sheet mulch. Spray immediately if any weeds are present. If the weeds are showing but planting is delayed, spray after one month following cultivation. To allow dormant seeds to germinate. All spraying shall be carried out by skilled and qualified operators, using protective clothing in suitable weather (no wind and no damage caused by spray drift from incorrect usage or spillage) shall be notified at the contractor's own cost. Do not spray near a water body. Repeat as necessary to ensure complete kill and take off all weed material from site.

2.2 Carry out the following works to the existing topsoil on site to ensure it conforms to BS 3882:2015, being free from roots larger than 50mm diameter, all rocks, weeds, litter and have less than 20% clay. Allow for pre-application of herbicide as above. Fertilise with 50g per m² of per square of Hortibase CDF 15-6-12 slow release fertilizer in accordance with the manufacturer's instructions. For beds less than 5 metres in width, turn over manually or machine rotavate soil to a depth of 400mm, ensuring that the subgrade and topsoil are completely broken up and free draining, relieving any compaction. For beds greater than 5 metres in width, break up the subgrade and topsoil using a tractor mounted subsoiler or ripper at 500mm centres to a depth of 300mm except where there are services, or within 10 metres of two drains or 2 metres of existing walls. Do not dig areas where roots greater than 10mm diameter are encountered.

2.3 Determine before submitting a tender, the extent of support from the site manager with ground preparation, ensure that all planting beds are covered to a level 50mm below adjacent grass or paved surfaces, within 400mm of edges to ensure bark or wood chip mulch can be applied. Where grass is proposed adjacent to paving, then the soil level shall be flush with the adjacent paved surface to ensure the water run-off. The landscape contractor is responsible for ensuring that the final ground conforms to the specification even when the developer and/or main contractor have failed to supply and/or spread topsoil to the required level. The landscape contractor shall allow for adjustment of levels, as specified above, including for any existing subgrade and topsoil where beds are sloping, ensure that topsoil is graded to the specified levels below pavement & grass surfaces within 400mm of the edges of the bed. This is to allow for sheet mulch and bark or wood chip mulch to be applied to the topsoil on pavements and to allow surface water to drain from paths on to planted areas.

2.4 Spacing ground that is shown to surface where there is a varying degree of topsoil levels of the grass areas shall be graded to finish flush with the finished pavement level to allow surface water to drain from pavements to soft areas. Soil of grass areas should therefore never be proud of paved areas. Soil levels more than 15mm below pavement edges will cause minor damage on rutting.

2.5 Imported topsoil (where specified and sanctioned by the employer) for making up ground, shall conform to BS 3882:2015, and be free from roots (over 50mm diameter), concrete, roots, weeds and litter, and have less than 20% clay. Such soil shall be spread and worked in at cut above. Representative samples shall first be approved by the landscape architect before being supplied to site. No topsoil shall be supplied to site without a written instruction.

3.0 Planting

3.1 All planting must be carried out in accordance with the tender document, and accompanying drawings. Refer to the tender document for the preparation of existing topsoil and required depths for planting, watering, and trees, and also for contractual maintenance requirements.

3.2 The specifications will be accepted without the prior agreement of the responsible landscape architect. The contractor shall replace or once at his own cost any stock lost, spoiled or variety of plant which has not been specified on the planting plan and schedule, unless in prior written agreement a substitution has been agreed by the responsible landscape architect. All plants shall be true to the species specified in the schedule of plants and associated notes.
