PROPOSED HEDGE PLANTING

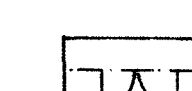

PROPOSED SPECIMEN SHRUB.

PROPOSED BULB PLANTING

GRASS.

PROPOSED GATES/FENCING.

The palette of planting is typical of traditional herb & kitchen gardens. This is considered to be appropriate given the rural location in & around former farm outbuildings.

The planting is a mixture of ornamental & productive with evergreen specimens for all year round structure & colour. Soft fruit, culinary herbs & orchard varieties are used extensively.

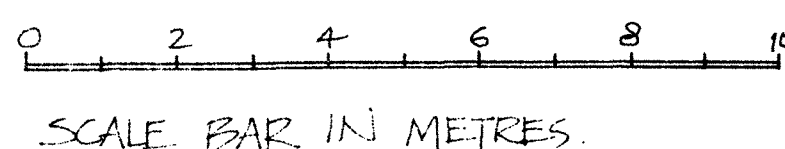

Seasonal change will be enhanced by the use of herbaceous & bulb planting

The planting is arranged to take best advantage of the microclimate created by the rebuilding of the crewyard. The shelter of open aspect is perfect for most planting. However, only shade tolerant ferns are likely to cope with the heavy shade cast on the planting bed adjacent to Unit -5. The chosen varieties are not an uncommon sight in redundant ranges around the district.
