Subject: Additional tree works following site meeting, H14-0081-26.
Attachments: TREES 34 CHURCH STREET, SHOWS ADDITON OF ASH AND JUDAS TREE..pdf

Suggested additional works by Trees and Nature Conservation Officer, as agreed with Owner on 27th February 2026:

Removal of a low branch from an ash tree, which is dominating and supressing the adjacent Bramley apple tree to the east. The ash is situated in the northwestern corner of the grounds of 34 Church Street, but on the strip of land between the back of the rear garden fence and a drain.
The ash requires the ivy to be severed.

Limited minor thinning (removal of rubbing branch) /reduction works to a Judas tree, to help relieve pressure at points of attachment of elongated branches; try to achieve a more balanced canopy. Located immediately adjacent and to the southeast of the whitebeam. Had previously suffered from some storm damage, which maybe has made the remaining branches look more elongated and unbalanced.
A little dead wood to remove.

Please file on H14-0081-26, **public bit**.
Thank you.

Yours sincerely,
Diane.
