CASE OFFICER ASSESSMENT

Proposal

Section 73 Modification - Proposed cemetery, storage building and parking and use of land as an informal public recreation area, previously approved under H14-0286-22. This Section 73 application proposes modification of Condition 2 to allow amendments to previously approved plans.

The Parish Council wishes to make alterations to the approved layout and small storage building following further internal discussions and hence the submission of the revised plans.

The proposal retains the same elements and the same site area as the original, but in a slightly different configuration and the design and location of the small amenity building has changed.

The works have not commenced.

Site Description

The application site measures 3.17ha and is located immediately adjacent to the settlement boundary of Pinchbeck, as set out in the South East Lincolnshire Local Plan (SELLP). Pinchbeck is considered to be a Main Service Centre, as defined in the SELLP.

The proposed development site is shown to be within Flood Zone 3a 'High Probability' as detailed on the Environment Agency's Flood Zone Maps without defences, and as defined in Table 1 of NPPG.

The site comprises two agricultural fields, is roughly triangular in shape and is largely flat with few features. The western boundary is characterised by the railway line and the entire eastern boundary is adjacent to Blue Gowt Lane to a point where it meets Market Way. The northern boundary is characterised by the rear garden boundaries of dwellings on Penway Drive. The two other boundaries are characterised by sporadic native planting.

North of the application site is Pinchbeck, with agricultural land to the east and south, and a railway line to the west.

History

H14-1097-20. FULL. Proposed Cemetery, Storage Building and Parking, and the Use of Land as an Informal Public Recreation Area. APPROVED 15-02-21.

H14-0286-22. Section 73 Modification. Proposed cemetery, storage building and parking, and the use of land as an informal Public Recreation Area - approved under H14-1097-20. Modification to Condition 2 to allow amendments to previously approved plans (Different site configuration and design and location of the amenity building changed). APPROVED 06-05-22.

Consultation Responses

Pinchbeck Parish Council

Is the applicant.

SHDC Environmental Protection

Noise - no objection.

LCC Highways & SUDS Support

No objection.

On the understanding that this Application seeks only to amend design details within the site, that the Parish Council are satisfied that the reduced number of car parking spaces now being proposed will be sufficient for the day-to-day operational requirements of the Cemetery and that all other Conditions of the Consent granted under reference H14-0286-22 remain binding, then the highway authority does not wish to object to the grant of Consent for this Application.

Environment Agency

Have no comment to make on this application.

Welland and Deepings Internal Drainage Board

Have no comment to make with regard to this application.

Public

No representations received.

Planning Considerations

PLANNING CONSIDERATIONS

The main issues in this case are:
Principle of Development
Sustainability
Layout and Design
Highway safety and parking
Impact of neighbouring Residents/land users
Flooding considerations
Foul and Surface Water Drainage
Landscape Impact
Contaminated Land
Heritage considerations and Archaeology
Biodiversity
Lighting/Hours of Use

Principle of Development

Section 38(6) of the Planning and Compulsory Purchase Act 2004 states that, "If regard is to be had to the development plan for the purpose of any determination to be made under the Planning Acts the determination must be made in accordance with the plan unless material considerations indicate otherwise."

The Parish Council has identified that the existing cemetery is close to capacity and with the rising

population and growing settlement, there is the need for a new cemetery to facilitate the demand.

Policy 32: Community, Health and Well-being of the SELLP is a broad ranging policy covering various factors that require consideration when determining planning proposals including rights of way; encouraging healthy lifestyles; and provision of new or enhancement to existing community facilities. This policy mentions planning permission granted for the extension of cemetery and open space at Gosberton, however makes no mention of other site specific proposals.

At Section 8, the South East Lincolnshire Infrastructure Delivery Plan 2016, that informed the SELLP, sets out an assessment of inter alia, the South Holland District's on-going need for sport, leisure and green infrastructure, and identifies the needs for potential Parish Council funding for burial spaces, but does not identify sites.

The policies listed in the Planning Policies section above are also to be considered in the assessment of this proposal.

It is considered that locating the burial ground close to the boundary with the settlement, given access to residents of Pinchbeck is acceptable and the proposal accords with the intentions of the SELLP and NPPF.

Sustainability

The informal public recreation area will be a significant addition to green space for Pinchbeck. It is not proposed to provide sports pitches, but, simply a place to be used at people's leisure, for example for dog walking and jogging.

It is anticipated that the new informal recreation area will become a valuable asset to the green space on offer to the local community and enhance the health and wellbeing of the local population.

The proposal accords with Local Plan Policies 2 and 32 in that it represents sustainable development on the fringe of the village and is commensurate in scale and layout to the needs of the community.

Layout and Design

The changes to the approved design layout would not have greater impacts to adjoining residents or land users, and are considered to be acceptable. The consultation responses from LCC and the SHDC Environmental Protection Team regarding parking and noise are to be noted.

The changes to the amenity building would not impact upon the merits of this proposal.

Highway safety and parking

The number of overflow parking spaces proposed is now reduced from 30 to 12, with the original 12 main parking spaces being retained. The response of LCC is set out above and in the light of this it is considered that the parking accords with with Policies 2 and 3 of the SELLP in this regard.

The application still shows a link to the existing footpath and this is to be delivered by condition.

Impact of neighbouring Residents/land users

Flooding considerations

When applying the sequential approach for flood risk in accordance with the NPPF the site would fall into Zone 3a (High Probability) as the site is shown to be within the tidal flood plain as shown on the Environment Agency's Flood Map without defences in place.

However, the results of the updated SHSFRA shows that the site is located within a low/medium probability flood zone, but the area is reliant on protection by flood defences providing a standard of protection of 1 in 100 years return period.

The proposal is for a change of use of agricultural land to a cemetery and recreational area. The NPPG (para.164), states that a change of use should not be subject to the sequential and exception tests but will still need to meet the requirements of a site-specific flood risk assessment, which has

been submitted.

The Environment Agency has published guidance on cemeteries and burials to ensure groundwater pollution does not occur, the main points are: -

A burial site must be:
I. at least 250 metres from any well, borehole or spring supplying water for human consumption or used in food production - for example at farm dairies
II. at least 30 metres from any spring or watercourse not used for human consumption or not used in food production
III. at least 10 metres from any field drain, including dry ditches
IV. have at least 1 metre clearance between the base of the grave and the top of the water table - they shouldn't have any standing water in them when dug.

The submitted Flood Risk Assessment sets out that geology of this area consists of tidal flat deposits - clay & silt, overlying the Oxford clay formation - Mudstone. At this location, the superficial deposits are classified as an unproductive aquifer: These rocks have negligible significance for water supply or baseflow to rivers, lakes and wetlands. They consist of bedrock or superficial deposits with low permeability that naturally offer protection to any aquifers that may be present beneath.

With the site being over a non-productive aquifer and therefore outside Source Protection Zone 1 and any other designated SPZ, the proposed cemetery, therefore, poses no unacceptable risk to groundwater used for drinking water and food production purposes. No burial plots will be located within 30m of the Blue Gowt Drain No 2 or any other watercourse.

Most of the site is shown to be at no risk from surface water flooding with an isolated small area at risk up to 300mm deep. The site is, there considered to be at low risk. Low risk means that each year this area has a chance of flooding of between 0.1% and 1%. Flooding from surface water is difficult to predict as rainfall location and volume are difficult to forecast.

Foul and Surface Water Drainage

The car park and access road and footways will have an informal layout and will be constructed with permeable construction such as hardcore with a granite chipping surface rolled into the top surface. The roof water from the amenity building will discharge to soakaways designed in accordance with BRE digest 365.

As there is a positive drainage system capable of receiving flows from the development there is no likely impact on neighbouring property.

Pinchbeck Parish Council will be responsible for the maintenance of the entire surface water drainage system.

Any impact of damage to the properties can be foreseen and mitigated against by relatively simple design and construction techniques. There are two forms of flood protection works: -

· Flood-resistance or proofing works: - these try to reduce the amount of water entering a building.
· Flood-resilient works: - these reduce the amount of damage caused by water entering the building.

Landscape Impact

There is little in the way of landscaping within the site itself and so it is proposed to introduce planting between the cemetery and the recreation area, and also to the site boundaries.

The site plan shows an indicative planting scheme, which will be the subject of further details to be secured by condition.

The purpose of the planting will be to add biodiversity to what is currently an agricultural field, rather than to provide screening. Screening will promote anti-social behaviour if there are limited views in and out of the site and, having regard to the 'light touch' that the proposal has on the landscape, there is no need to provide significant screening. The proposal is, therefore, compliant with Policy 2.

Contaminated Land

The use of land for burials is required to meet strict environmental conditions established by the Environment Agency in order to safeguard against groundwater pollution. The site is located in an area classified as an unproductive aquifer and therefore is outside the Source Protection Zone 1 and any other designated SPZ.

Heritage considerations and Archaeology

The LCC Historic Environment Officer concludes that no archaeological input required. The proposal accords with Policy 29 of the SELLP.

Biodiversity

A landscaping scheme is proposed to encourage an increase in biodiversity, on this edge of settlement site. This is to be controlled via condition. The proposal accords with Policy 28 of the SELLP.

Lighting/Hours of Use

The use of the site would be during those times when burials take place, which are normally daylight hours. Visitors in quiet contemplation would be unrestricted and would tend to again be during daylight hours. The wider site for informal leisure would be unrestricted.

A condition is proposed to require any lighting proposals to be submitted and approved in the future. No lighting is proposed at present.

It is considered that the use of the site would be commensurate with the function proposed and would not cause a detrimental impact to neighbouring residents or to the quiet nature of the area. The proposal accords with Policies 2, 3 and 28 of the SELLP.

Conclusion and Planning Balance

Section 38 (6) of the Town and Country Planning Act, as amended by the 2004 Act, states that the determination must be made in accordance with the development plan unless material considerations indicate otherwise.

The proposed development would not materially harm the character or appearance of the locality, or amenity of nearby residents, and provides adequate parking. Taking into consideration these factors, the proposal is considered to comply with Policies 1, 2, 3, 4, 5, 28, 29 30, 31, and 36 and Appendix 6 of the South East Lincolnshire Local Plan (SELLP), 2019, plus advice within the National Planning Policy Framework (NPPF), 2021.

Details are to be submitted via condition to control the car park surfacing so as to reduce noise as well as to serve drainage purposes, and lighting of the site is to be controlled.

Taking the above in to account, there are no significant factors in this case that indicate against the proposal and outweigh factors in favour of the proposal and the policies referred to above.

Conclusion

Approve, with conditions.

Additional Considerations

Public Sector Equality Duty

In making this decision the Authority must have regard to the public sector equality duty (PSED) under s.149 of the Equalities Act. This means that the Council must have due regard to the need (in discharging its functions) to:
A. Eliminate unlawful discrimination, harassment and victimisation and other conduct prohibited by the Act
B. Advance equality of opportunity between people who share a protected characteristic and those who do not. This may include removing or minimising disadvantages suffered by persons who share a relevant protected characteristic that are connected to that characteristic; taking steps to meet the

special needs of those with a protected characteristic; encouraging participation in public life (or other areas where they are underrepresented) of people with a protected characteristic(s).
C. Foster good relations between people who share a protected characteristic and those who do not including tackling prejudice and promoting understanding.

The protected characteristics are age, disability, gender reassignment, pregnancy and maternity, race, religion or belief, sex and sexual orientation.

The PSED must be considered as a relevant factor in making this decision but does not impose a duty to achieve the outcomes in s.149. It is only one factor that needs to be considered, and may be balanced against other relevant factors.

It is not considered that the recommendation in this case will have a disproportionately adverse impact on a protected characteristic.

Human Rights

In making a decision, the Authority should be aware of and take into account any implications that may arise from the Human Rights Act 1998. Under the Act, it is unlawful for a public authority such as South Holland District Council to act in a manner that is incompatible with the European Convention on Human Rights. The Authority is referred specifically to Article 8 (right to respect for private and family life) and Article 1 of the First Protocol (protection of property).

It is not considered that the recommendation in this case interferes with local residents' right to respect for their private and family life, home and correspondence, except insofar as it is necessary to protect the rights and freedoms of others (in this case, the rights of the applicant). The Council is also permitted to control the use of property in accordance with the general public interest and the recommendation is considered to be a proportionate response to the submitted application based on the considerations set out in this report.
