As part of a family business established in 1964, Monarch, situated in the heart of England, has become a leading manufacturer of Equestrian Products. This dominant position within the marketplace has evolved over the years as a result of our effective design and manufacturing policy, which places the emphasis on quality not quantity.

At Monarch, we are conscious that all our customers, however large or small their requirements may be, *receive not only the highest quality products,* but equally as important, a reliable service -from start to finish.

Utilising the latest technology in our manufacturing units, Monarch's highly skilled production team are closely supervised by the owners, who are themselves experienced horse-owners and riders, and can relate to the need for 'getting it right first time'.

Let us assure you, at Monarch we are never complacent! That is why we are always looking to improve and expand on our existing product lines. Whilst Stabling and Horse Exercisers are the largest sector of our business, our Handling Stocks, Horse Solaria, and other products have been designed to complement the increasing 'House of Monarch' equestrian range. In true Monarch style, these too are built to last.

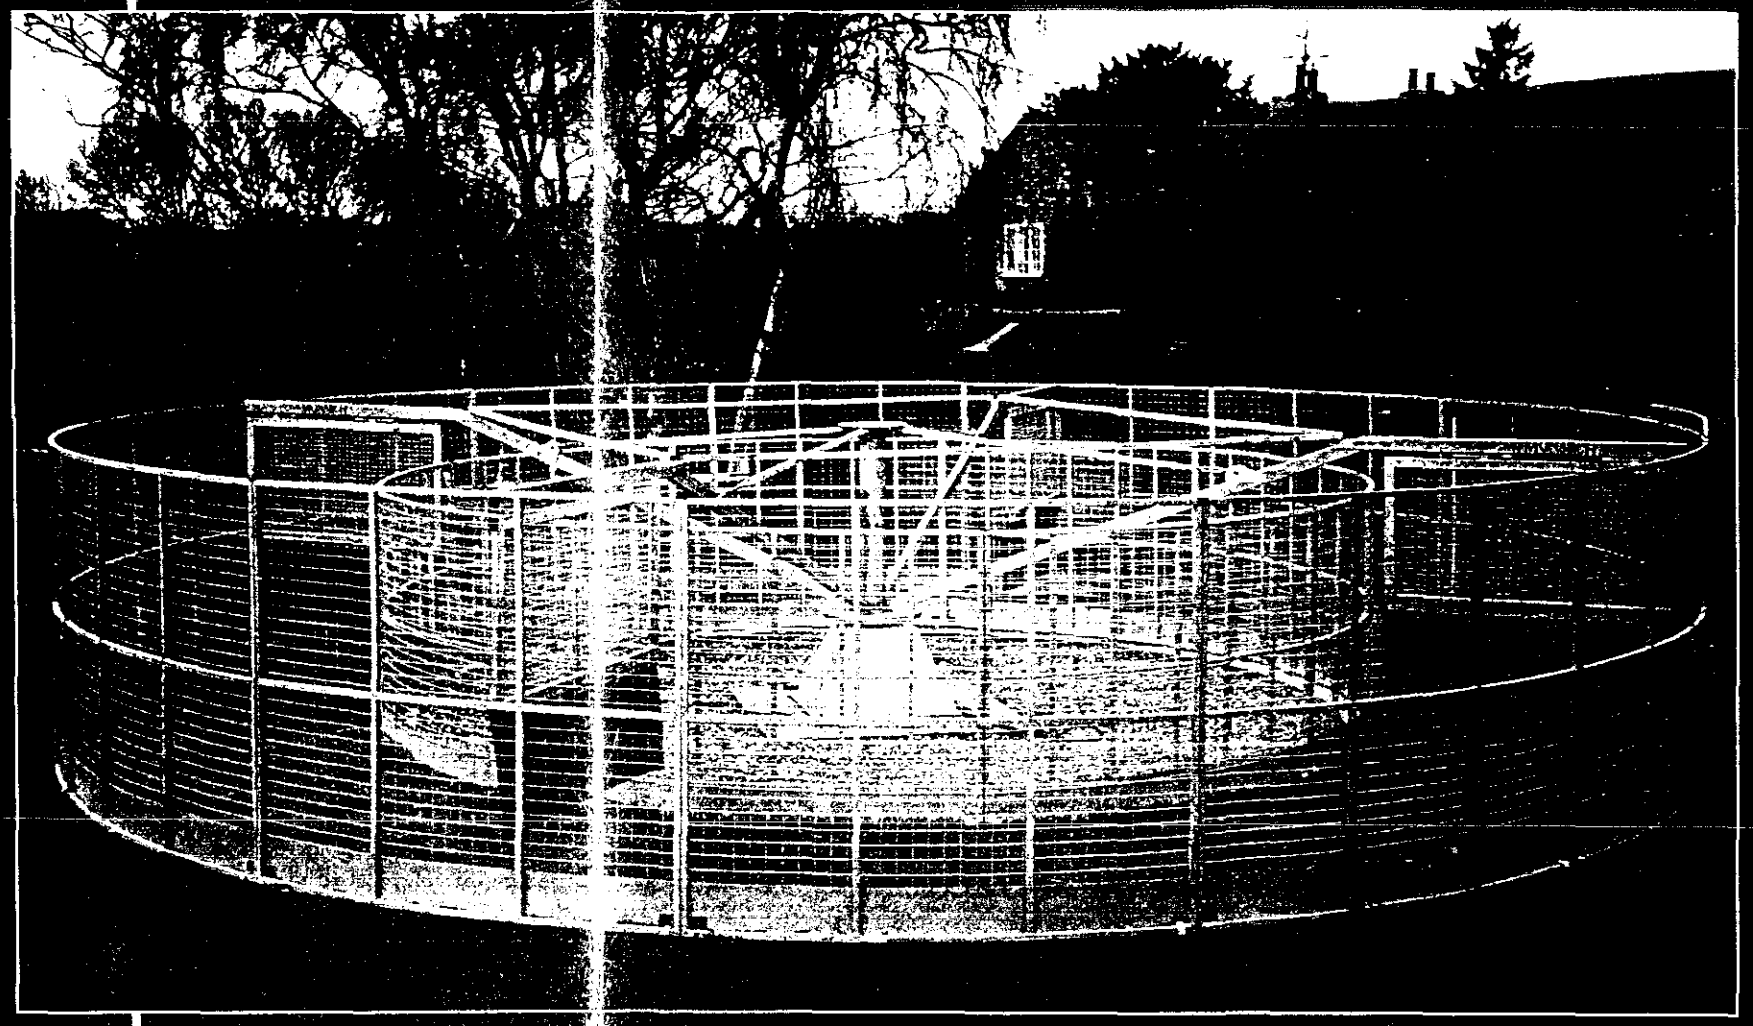

Monarch are always available to offer sound advice and answer your enquiries. If you require further information on the range of Monarch stabling or Equestrian products, please contact:

HORSE EXERCISERS

DETERMINED
PLAN

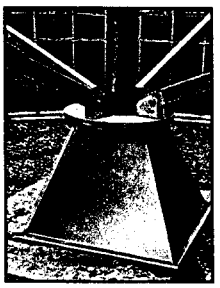

NEW

ROYAL

▲ Our basic model, The New Royal has static mesh curved inner and outer fences (it can also be supplied without fences). It is available only in 36' diameter 4 or 5 horse models.

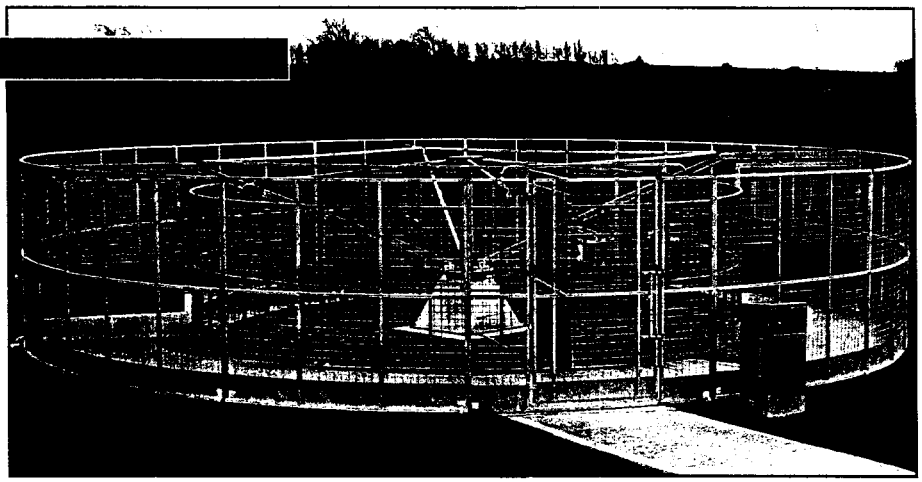

M

IMPERIAL

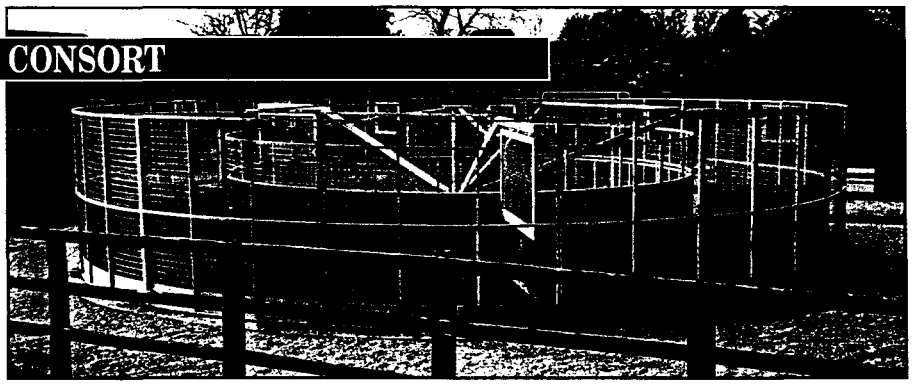

The Imperial, our standard model has static mesh 6' high curved inner and 7'6" outer fences complete with a 10" surface retaining strip. Available in 36' or 45' diameters as standard. ▶

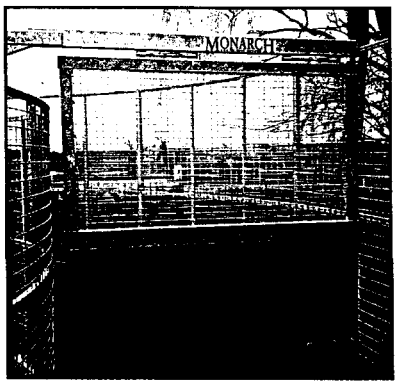

The Consort provides extra protection with the inner fence being lined with rubber to a height of 4' with the top section in mesh, giving a clear view in through the exerciser. ▼

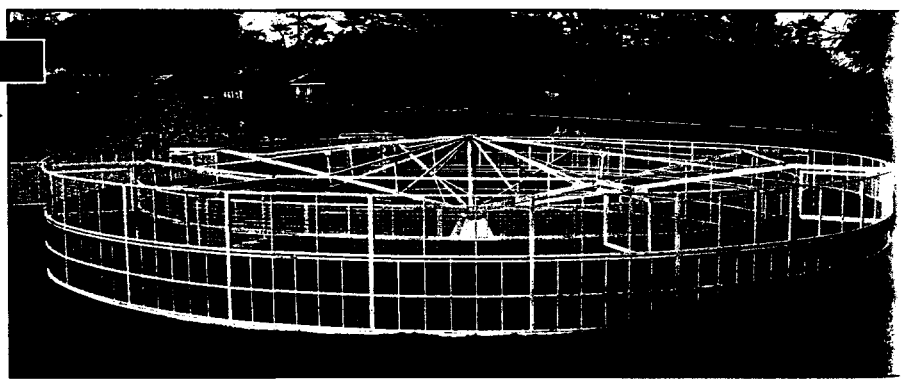

CONSORT

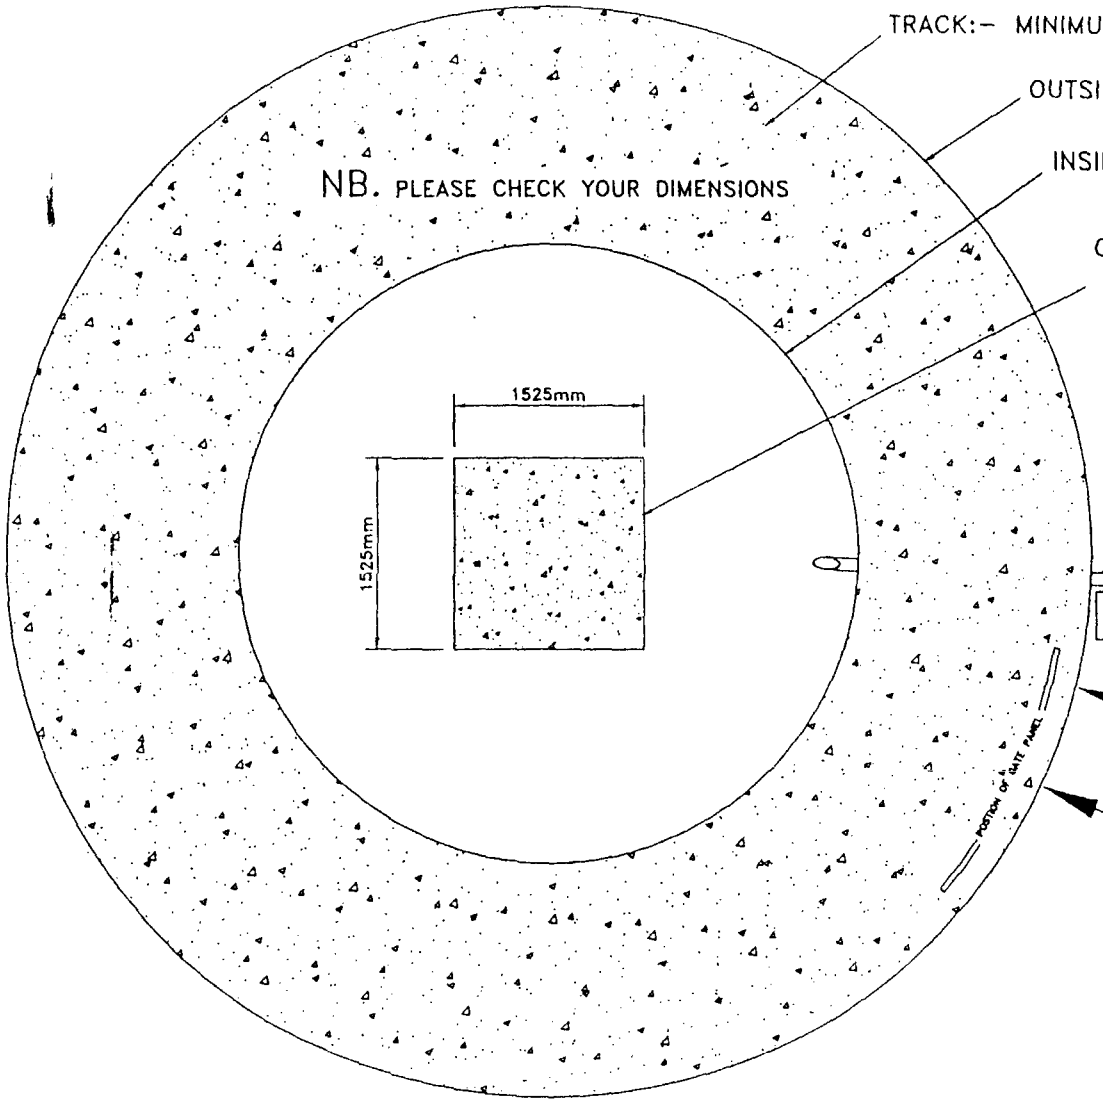

CONSORT PLUS

The Consort Plus provides further protection with the inner fence being lined with rubber to a height of 4' and an additional 4' of rubber lining on the 7'6" high outer fence. The top sections are mesh, giving a clear view through the exerciser. Illustrated is the 66' diameter 8 horse model. ▶
