Hi David

Please find attached my comments in bold.

If you wish to see a copy of the certificate for the fume extraction then I can E-mail it across.

Kind Regards

Phil Wilson I.Eng, M.I.PlantE, MSOE | Manufacturing Director |

SHDC – Environmental Protection Officer

Should the additional spraybooth result in MBE Fabrications using more than 5 tonnes of solvent (VOCs) in any 12 month period, they will need to apply for a Part B permit to operate under the Environmental Permitting Regime. For further information they should contact the Environmental Protection Team.

The spray booth is being relocated to a different building with more insulation and space than we currently have, the old spray booth will become a blasting shed, so rather than being an additional spray booth it is an upgrade to the existing. Our VOC's were also very low at the last audit that we had with yourselves.

Members of the public

Air pollution from spray booth:

We have had a new fume extraction system fitted in November which meets all legislative requirements for fume extraction as certified by the installer, this should take away previous concerns.

Increase in traffic:

As discussed at your site visit, the first phase of the extension is only one bay at this time. The extension is more about the length of the pits requiring a longer building rather than quantities leaving the premises.

Can trees / hedging / fencing be installed to better enclose the site?

The member of the public who might have raised this issue came round to discuss with myself the planning application. He did not quite understand what we were hoping to achieve, so I took him round the site and showed him where the extensions are going and the layout. Other than a light that is on the existing building that partly spoils his star gazing activities which we are taking down anyway, he seems satisfied with what we are doing. I have an e-mail to that affect from him.
