For/Against	Comments

A human burial and several undated features of probable Roman date were found during previous pipe laying in the southeast part at the factory complex.

However, following consultation with the planning officer and review of additional construction plans, this office considers groundworks not exceeding 500mm are unlikely to reach archaeological layers which are sealed by post-Roman silts (found to be in excess of 1000mm deep in this area). Therefor no archaeological input should be required.
