

Telegraph Poles

At least two dummy Telegraph Poles will be sited in the area allocated as a dummy street training area.

These poles will be similar to the familiar telegraph poles seen on most roadsides. The poles will be made of pressure treated Scots Pine wood or similar, approximately 160mm in diameter at the base.

Unlike roadside poles, which can reach over 9m in height, these poles will be restricted in height to no more than 4m above the ground to minimise their impact on the surroundings.

Telephone Junction Box

At least two dummy Telephone Junction boxes will be sited in the area allocated as a dummy street training area.

These junction boxes will be similar to the familiar boxes seen on most roadsides as shown in this image.
