To who it may concern

Dear Sir/Madam,

As a part of my application I would like to include this supportive letter for my BBQ project.

The BBQ is going to be located within 500 mm of the property boundary (the fence we own). However, I can assure you the BBQ structure will not be a fire hazard to any property or property boundary. The chambers which will be in direct contact with fire will be built using heat resistant fire bricks and heat resistant mortar. In order to keep the facing brick on the outside of the BBQ cold, the fire brick will be insulated with heat proof ceramic blanket. I have included a few pictures below to illustrate the proposed work.

The height of the BBQ is going to be 3m, however the only part of the BBQ that will elevate above the fence and be seen by neighbours will be the chimney. The BBQ will be located on the east side of the property, therefore the neighbouring property will not have any issues with the BBQ blocking sun into their garden. It will not cause an obstruction of the view for the neighbour's garden/property.

The structure will not be used for commercial purposes. The BBQ is intended to be used for occasional family BBQ's. The structure is located 7.2m away from the neighbouring property, therefore I believe the smoke should not be an issue. The high chimney will cause smoke to disperse away at a higher level so smoke shouldn't be an issue if someone is drying their clothes on a washing line.

I hope you find all listed above point reasonable and the illustrations below helpful.

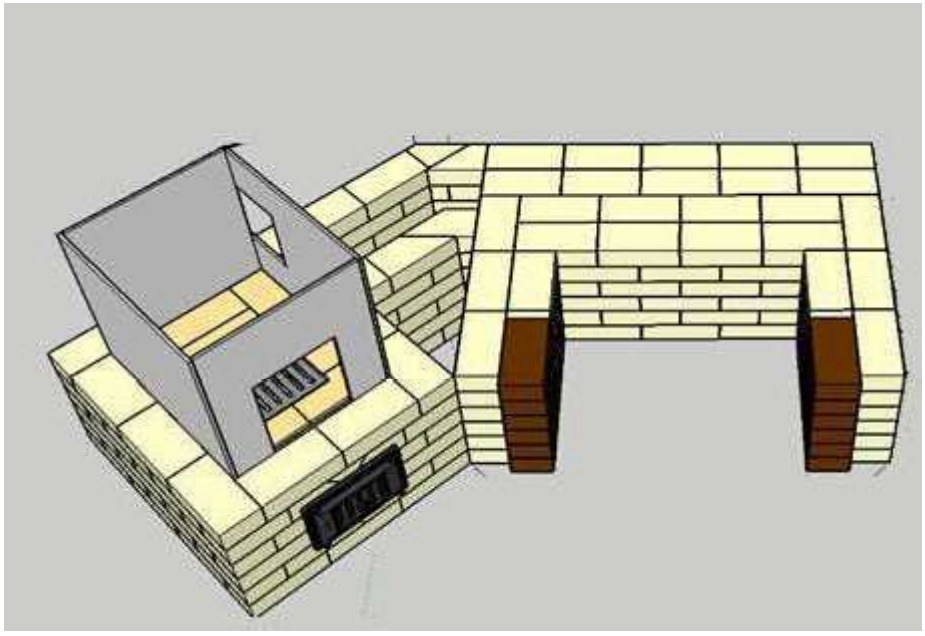

Kind regards

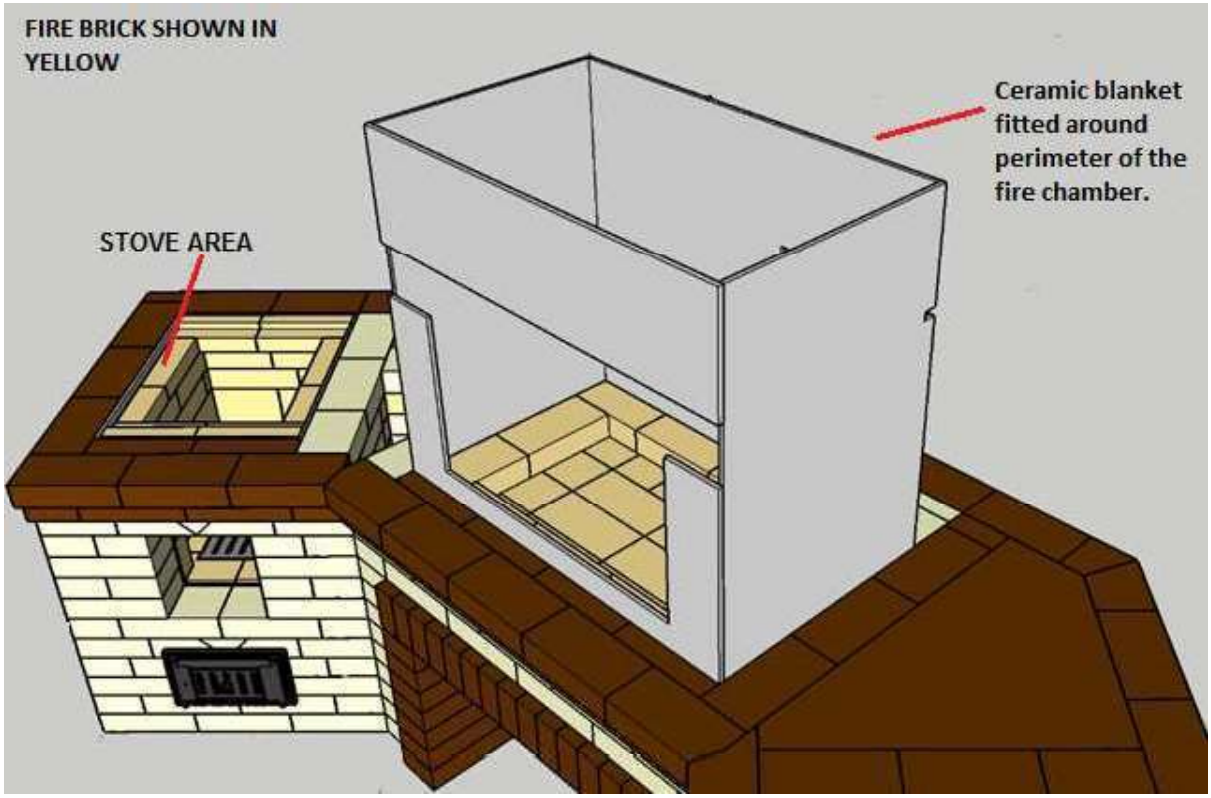

Jelena Kustova

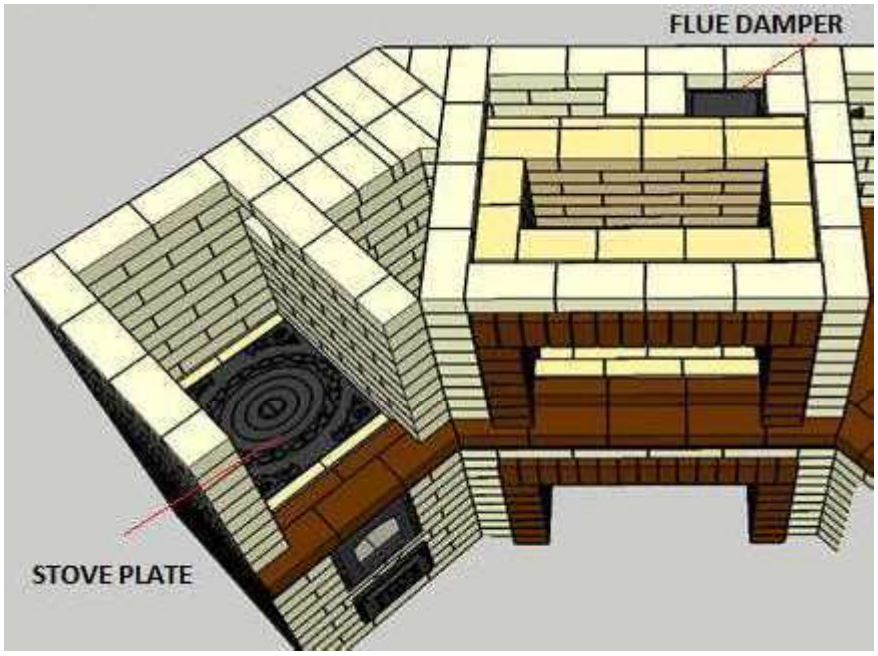

Proposed BBQ
