Nationwide Fencing Services Ltd

Hit & Miss Timber Fence

Product Overview

Nationwide Hit & Miss system earns its name form the construction methods used; boards are fixed on the side of the panel and supported by vertical battern.

The gaps in the boards allow air and light to pass through the fence and therefore reduce wind resistance. This is especially beneficial in areas prone to high winds and could save you having to replace your fence due to harsh weather.

Technical Specification

- **100x100mm Timber Post**
- **100x50mm Timber Rail**
- **125x22mm Boards**
