

Proposed revisions to the signage and illumination are as follows:

- All colour-changing illumination has been removed.
- Two wide linear fascia lamps are proposed above the existing Blendly Hair Studio fascia signs, one on each elevation.
- The lamps will provide low-level, downward-facing illumination to the fascia signs only.
- The lighting will be static, warm white and designed to minimise light spill and visual impact.
- The existing barber poles will remain in place as traditional decorative features but will not be illuminated, rotated or operated.
- The barber poles will be finished in a simple black-and-white appearance and will remain permanently switched off.

These amendments are intended to provide a more traditional and restrained appearance that better preserves and enhances the character of the Conservation Area while maintaining clear business identification.
