

key features & options

locking systems

Your new windows are available with a choice of locking system to suit any need: Espag To provide added resistance to an intruder this system locks in multiple places around the opening. The lockable handle has a quick release feature for easy operation and a lockable ventilation position allows secure ventilation whilst you sleep.

Shootbolts Frame corners are considered the most vulnerable point of attack by intruders. Top of the range in window security, shootbolts offer all the features of the Espag system with two additional steel bolts, which are driven into the corners of the window when the handle is closed.

sculptured detail

The classy and luxurious look of an age gone by can be recreated through the use of a sculptured vent and outer frame. The detail is called an Ovolo, and can be the perfect finishing touch to your new windows.

security hinges

Another innovation that can be added to your new window is the security hinge. An "L" shaped arm in the top of the hinge reduces the risk of the hinge being forced open.

'L' shaped security hinge

£1 coin security test

For a simple security test see if you can insert a £1 coin into the gap between the opening vent and the frame of a closed window. Just imagine how easily a burglar could force open the window with a Jemmy or crowbar. The aluminium windows in our *Beaufort range* easily pass this test.

£1 coin security test

internal glazing

Crime prevention officers and insurance companies recommend the use of our type of Internally Glazed windows. The glass is fitted into the frame from the inside, making removal from the outside impossible. The

inside appearance of the windows is also enhanced by the use of full sloping glazing beads.

fire escape hinges

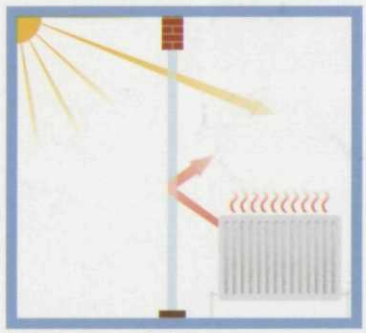

To allow an additional method of easy escape in the event of a fire, we can include a wide opening fire escape hinge on a window on the upper floor of your property. The hinges also allow easy access, enabling you to clean the window from inside.

fire escape hinge easy clean access

energy saving

To reduce heat loss and to conform to current building regulations your windows can come complete with low energy glass whenever required. This glass reflects heat back into the home greatly reducing fuel bills. The frames of the windows include a thermal barrier that reduces heat transfer through the frame.
