

slim, attractive and very strong...

...aluminium offers the best in appearance and performance.

Your new windows will be made as slim as possible to increase the light that can pass through and to eliminate the unsightly and bulky appearance visible on more common window materials. This is possible on aluminium windows because of the natural strength of aluminium. You will be glad that you chose aluminium when you see the effect the slim frames will have on the appearance of your home.

internally glazed

To ensure that you have the best possible security, crime prevention officers and insurance companies recommend our type of internally glazed windows. Most windows are glazed by inserting the glass into the window from the outside and statistics show that an increasing number of burglaries take place after the crook has removed the glass in this manner. To combat this, your new windows will be glazed from the inside, using the most secure method of glazing possible.

style without compromise

Add a luxurious appearance in either a modern or traditional theme. Your new windows can be tailored to complement your home's style and character with shaped vents and a range of colours to choose from, including black outside and white inside. Our most popular colour is our gleaming high gloss, brilliant white, that will keeps its good looks for years with very little maintenance. You choose exactly what you want and we can make it.

bays and bows

Take a look at the bay windows in your area - the ones that look the best are probably aluminium. Bay windows require extremely strong sections, but to maintain the character of your home they must also be slim and attractive. Aluminium combines all these features and has proven its ability to perform successfully for over 30 years.

equal sight lines

Give your home a further dimension in style and character by creating a symmetrical and well-balanced look that is appealing to the eye. We recommend the use of imitation vents in the areas of fixed glass to give this special appearance. Aluminium is perfect for this effect because the slim sight lines avoid the bulky look that is typical of other framing materials.
