

PVC-U and maintenance...

Just a little really does go a long way. Modern PVC-U not only looks great but also needs very little maintenance to keep it looking its best and working well too.

You need only invest a few moments now and again to bring out the very best in the products. Just the occasional wipe down with soapy water and a spot of lubricant in the mechanisms will keep PVC-U windows, doors and conservatories looking almost new for years to come. Ask any reputable PVC-U installer for more details of how to look after your investment.
