Woodgrain

Now there's no need to turn your back on the lustrous look of wood when you choose the luxury of modern materials.

State-of-the-art foil technology means the appearance and even the texture of beautiful natural grain can be made more lifelike than ever while the bonded surface conceals all the well-known benefits of PVC-U.

It hardly need be said that our woodgrain is far less lifelike in a few other ways and will not rot, warp, crack or need painting.

Windows

Choose from the classical and luxurious mahogany, the rustic charm of pine or the demure subtlety cherrywood and walnut. The versatility of this modern material even gives you the option to choose any woodgrain for the outside surfaces and brilliant white for the inside.
