VALIDATION REPORT FOR FORMER BIRDS PUBLIC HOUSE, HALMER GATE, SPALDING, LINCOLNSHIRE

CLIENT: LIFE PROPERTY CONSTRUCTION LIMITED

---

1. INTRODUCTION

In accordance with our estimate, ref. E7111 dated 2 June 2021, and following and receipt of Purchase Order SP365, dated 3 June 2021, from the Client we have prepared this Phase IV Validation Report.

We have previously issued the following reports for this site:

- Phase I: Walkover Survey & Desk Study Report, ref. NE3769, November 2018.
- Phase II: Ground Investigation Report, ref. NE3769A, March 2019.
- Phase II: Additional GI Report, ref. NE3769B, June 2019.
- Phase III: Remediation Statement Report, ref. NE3769C, July 2019.
- Waste Classification Report, ref. NE3768D, August 2019.

1.1 Site Location and Description

The site is located to the south south east of the junction of Halmer Gate, Albert Street, Queens Road and Low Road in the eastern part of Spalding, Lincolnshire, as shown on Figure 1. The National Grid Reference of the centre of the site is TF. 2580 2290 (E.525795m, N.322898m).

As shown on Figure 2, the near trapezoidal shaped about 0.47 hectare site is bounded to the north west by Halmer Gate with houses beyond, to the north by the road junction with houses and commercial/ industrial premises beyond, to the east by houses and commercial/ industrial premises and to the south and west south west by houses off of Avebury Gardens.

At the time of our visit to site in 2019 the irregular shaped The Birds Public House building occupied the central northern two thirds of the site, largely surrounded by bituminous macadam surfaced car parks, with a small square building about 16 metres to the south. Beyond the small square building and a fence the southern third of the site was a grassed beer garden with a children's play area. The site boundary was marked by fences and hedges with a drainage ditch along the eastern boundary. A small planted area was present on the central northern boundary and contained some semi mature and mature trees and bushes.

In the intervening period the public house has been demolished and the car park removed. Subsequently a care home has been constructed with a bituminous macadam surfaced car park to the north, grassed borders with footpaths and planters to the south and west and a raised deck to the east.

1.2 Development

The three storey 61 bedroom care home has garden areas to the south and west, a raised deck to the east and with a car park to the north, as shown on Figure 3.

Sub Surface North East Limited
RCM Business Centre, Dewsbury Road, Ossett, West Yorkshire, WF5 9ND
Tel: 01924 278181 Fax: 01924 283455 Email: dsimpson@subsurface.co.uk

2. VALIDATION

2.1 Contamination

2.1.1 Introduction

The Phase II Ground Investigation found speciated poly-nuclear aromatic hydrocarbons (PAHs) were elevated in the area to the east of the former building. Potential volatile organics were proven to be negligible. It was recommended, in accordance with the approved Phase III Remediation Statement, that a hard surface cover or clean cover system should be placed to protect the end users of the development. Alternatively the source of the contamination could be removed.

The Client has taken an alternative approach by constructing a raised paved deck to the east of the new building, effectively breaking the pathway from the source of the contamination to the end users of the development. No vegetated borders are present.

In addition the Client has formed grassed and vegetated borders to the south (end use unchanged) and west (former bituminous macadam surfaced car park removed) of the development and to the north of the car park (end use unchanged).

2.1.2 Validation of Depth of Clean Cover

Sub Surface North East Limited have taken out 7 No. hand dug trial pits in the vegetated borders to determine the thickness of the clean cover. The approximately 0.3 by 0.3 metre hand dug trial pits were excavated to depths of between 0.30 and 0.45 metres and representative samples were taken. The encountered soils were logged in general accordance with BS EN ISO 14688-1: 2018 and a photographic record was made. The Hand Dug Trial Pit Records and photographs taken are appended.

The Client has confirmed that the previously determined clean topsoil from the beer garden has been reused in the above vegetated borders with no imported topsoil or subsoil being required. No contamination analysis was therefore undertaken.

The reconstituted clean topsoil was found in all the hand dug trial pits to 0.45 metres depth, with the exception of HD7 were the pit was terminated on gravel sized fragments of stone at 0.30 metres depth. Possible buried services were present below.

2.2 Exported and Imported Materials

2.2.1 Exported Waste Materials

The Client has excavated out the bituminous macadam surfaced car parks to the north and east of the former building and removed the contaminated material to a licenced waste disposal facility. Photographs of the works to the north of the former building are appended. In addition the waste transfer notes, dated 6, 7, 10, 11 and 14 May 2021 are appended.

2.2.2 Imported Construction Materials

To the north of the development the Client has constructed a new car park and photographs of the preparatory works are appended. In addition the imported stone transfer notes, dated 6, 7, 10, 11 and 12 May 2021 are appended.

Sub Surface North East Limited
RCM Business Centre, Dewsbury Road, Ossett, West Yorkshire, WF5 9ND
Tel: 01924 278181 Fax: 01924 283455 Email: dsimpson@subsurface.co.uk

2.3 General

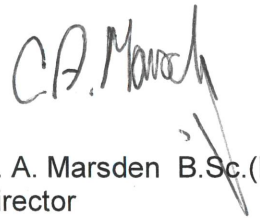

This Phase IV Validation Report should be submitted to the Regulator in order that planning conditions attached to this development can be signed off. We recommend that written approval is requested and obtained.

We trust that this report fulfils your present requirements but if you have any queries or we can be of further assistance please contact the undersigned or Mr David Simpson at our Ossett office.
