ALBERT STREET / ANNOTATION EVIDENCE

Google Street View | Imagery: July 2026 | Reviewed: 10 September 2026

No. 43 / immediate neighbour

Notes 04, 05, 06 and 07. Red multi brickwork; pale splayed first-floor window heads with central keystones; vertically proportioned openings with a horizontal division; projecting cills. These are direct detail references. The bay window and ornate door surround are not reproduced in the proposal.

Nos. 72 and 74 / closest detail match

Notes 04, 05, 06 and 07. Door numbers 74 (left) and 72 (right) are visible. The splayed ground-floor window and door heads with expressed central keystones are a particularly close precedent. Red brick walling, vertical windows, horizontal glazing divisions and projecting cills reinforce the connection.

Street View's upper-left address describes the camera location and can differ from the house being viewed. Building identification uses the searched address, visible numbers where available, and the surrounding frontage.

ALBERT STREET / ANNOTATION EVIDENCE

Google Street View | Imagery: July 2026 | Reviewed: 10 September 2026

Nos. 52 and 54 / roof and eaves

Notes 01, 03, 04 and 07. No. 52 is right; No. 54 is left. The pair has a shallow hipped roof and regularly spaced eaves brackets. No. 52 also has a pale splayed upper window head with a central keystone and red brick to its larger front bay. The architect identifies comparable detailing beneath the fascia at No. 47, added to note 03; No. 47 is not illustrated here.

No. 62 reference / qualification

Note 07 retains No. 62 from the architect's supplied brickwork references. The frontage identified through the No. 62 lookup is rendered, with exposed red brickwork on its side. This view therefore supports the local brick palette, but does not verify exposed front brickwork or a matching bond at No. 62.
