EAST ABUTMENT
Scale 1:25

NOTES

1. All cracked and spalled concrete is to be hacked off. With the area of spalling clearly revealed the area is to be delineated by saw cutting round the perimeter to a depth of 5mm. Prior to carrying out patching of the defective concrete, the exposed reinforcement is to be grit blasted SA2 of ISO 8501-1 as implemented by BS 7079: Part 1. The concrete is to be free from all dust, loose materials or other deleterious matter. A compressor is not to be used for blowing clean unless it can be shown that there is no possibility of contamination by oil mist.

2. Prebatched acrylic polymer modified cementitious mortars shall be used.

   The water/cement ratio shall be not greater than 0.4.

   The cement content shall be not less than 400kg/m³.

   The total chloride ion content of the materials shall not exceed 0.3% of the mass of cement. Calcium chloride or admixtures containing chloride salts shall not be used.

   The content of equivalent sodium oxide in the mortar shall be restricted or non-reactive aggregates shall be used, as defined in the relevant clauses of the 1700 Series of the Specification.
