I have reviewed G & J Geoenvironmental Consultants Ltd, Interpretive Desk Study for reservoir road, Surfleet, Ref: GJ394-01-R001-DS-V1, Dated: March 2026. This report has concluded that significant contamination that would present a risk for the proposed development is low and such no further investigations are required in relation land contamination. I am in agreement with this report and therefore recommend that the land contamination condition can be fully discharged.
