of the same type as the one used in the Generalized Confrontation Test (see, e.g., Table 1) and is applied to the observed probabilities of the different responses. The observed probabilities are obtained by averaging the observed probabilities over the different subjects. The observed probabilities are then compared with the expected probabilities in order to obtain the observed probabilities of the different responses. The observed probabilities are then compared with the expected probabilities in order to obtain the observed probabilities of the different responses. The observed probabilities are then compared with the expected probabilities in order to obtain the observed probabilities of the different responses.
