

Viewpoint C: Centenary Way.
Viewpoint is located approximately 1.1km northeast of the BESS proposal and approximately 700m from the existing solar development. A limited section of the solar farm is currently visible as existing vegetation along Centenary Way screens some of the panels from view. The BESS proposal would also be largely screened by this vegetation although the upper section of the proposed water tank may be very partially discernible behind the solar panels. By year 10 the planting associated with the solar farm would be mature and would screen all of the BESS proposal as well as the solar farm.

Viewpoint D: Gunthorpe Road.
Viewpoint is located approximately 1.4km south of the BESS proposal and approximately 700m from the existing solar development. The existing solar development is visible in the middle distance and this combined with the mature line of trees approximately 950m away are expected to entirely screen the proposal from view. By year 10 the planting associated with the southern boundary of the solar farm would be mature and would entirely screen the solar farm from view.
