Thus, framing a risk and not just the threat, encourages a wider range of options for risk management. For example, if the risk is framed as a threat, the focus is on preventing the threat from occurring. If the risk is framed as a risk, the focus is on preventing the risk from occurring. This is a more holistic approach to risk management, as it considers the entire risk management process, from identification to mitigation to monitoring and evaluation. This approach is more effective than a narrow focus on preventing the threat from occurring, as it allows for a more comprehensive assessment of the risk and the development of a more effective risk management strategy.
