Louise,

I see that you have been consulted by SHDC in respect of the above Planning Application.

We note your request for a watching brief during excavations, but would like to point out that the stables and the manure compound will merely sit upon a concrete slab set approximately 75mm above existing ground level, and the timber stable construction and the compound walls will sit upon this. The total depth of excavation will be approximately 225mm which is less than the ploughing depth experienced by the site when it was in arable use. In view of this, we would appreciate your agreement that your request for archaeological involvement be withdrawn please.

If you agree that you are able to do this in the light of the additional information now submitted, I should be grateful if you would let me know please.

Trevor
