The starting point for this research was the growing body of evidence that the way in which people are asked to respond to questions about their attitudes and beliefs is important. For example, people's responses to questions about their attitudes and beliefs are often influenced by the way the questions are asked. For example, people are more likely to report that they are environmentally conscious if they are asked to respond to a question about their attitudes and beliefs in a way that is consistent with the socially desirable response. This is known as the socially desirable response bias. The research was designed to investigate the factors that influence people's responses to questions about their attitudes and beliefs, and to develop a questionnaire that is designed to minimize the influence of the socially desirable response bias. The questionnaire was designed to be used in a variety of contexts, including in the workplace, in the community, and in the home. The questionnaire was designed to be used in a variety of contexts, including in the workplace, in the community, and in the home.
