- Privet hedge (1.8m)

Privet Hedge *(Ligustrum ovalifolium)*

Overview:
A tough, quick growing evergreen, suitable in most soils. Bare rooted plants establish very quickly. Lifespan can be as much as 70-80 years.

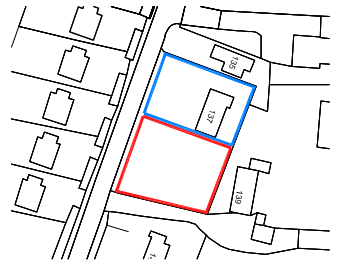

Planting season:-
Bare rooted plants to be planted between beginning of November to middle of March. (If hedge planted outside of this timescale then potted plants should be used).

Planting method:
Plant bare rooted plants (approx. 400mm high) in the ground with addition of organic matter plus bonemeal. Plant in a single row at 330mm centres.

Post Planting Maintenance:
As soon as the first new leaves emerge, trim the tops of plants. Reduce bare root plants in height by approx. one-third as this will make them bushier at the base. Water well until established. Once established, prune hard in spring and autumn.

Privet *(Ligustrum ovalifolium)*
