This application appeared to be a little scant on specific details regarding what would be entailed to change the use of this building. This chapel was built in 1838 and is in good external condition. I am unsure of the state of preservation of the internal features of this chapel but am keen to ensure their survival if they do exist. I would prefer that none of the existing fixed fittings are removed or destroyed/damaged in this change of use. This should be secured by the appropriate condition if permission is forthcoming.
