Single Span Polytunnel 24' wide (7.31m)

The 24' (7.31m) structure uses a larger diameter tube than the previous two, therefore creating a substantial framework at a useful size.
The tube used is 60.3mm diameter Z35 pre-galvanised steel with straight sides of 1m allowing for ample headroom at the sides.
The foundation tubes are from 1½" nominal bore (48mm) galvanised tube which allows the hoops to be set and adjusted for tensioning the cover.
The end frames are tanalised timber with the main posts and lintel from 3" x 3" (75x75mm) cross section.

As before, all fittings and fixtures are zinc plated for protection against corrosion.

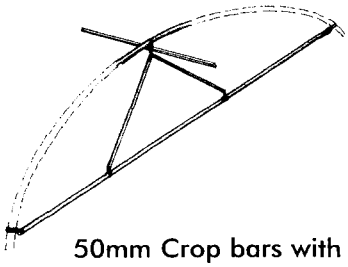

Hoop spacings are advised to be at maximum 7' (2.13m) for all conditions (100m.p.h. wind speed).

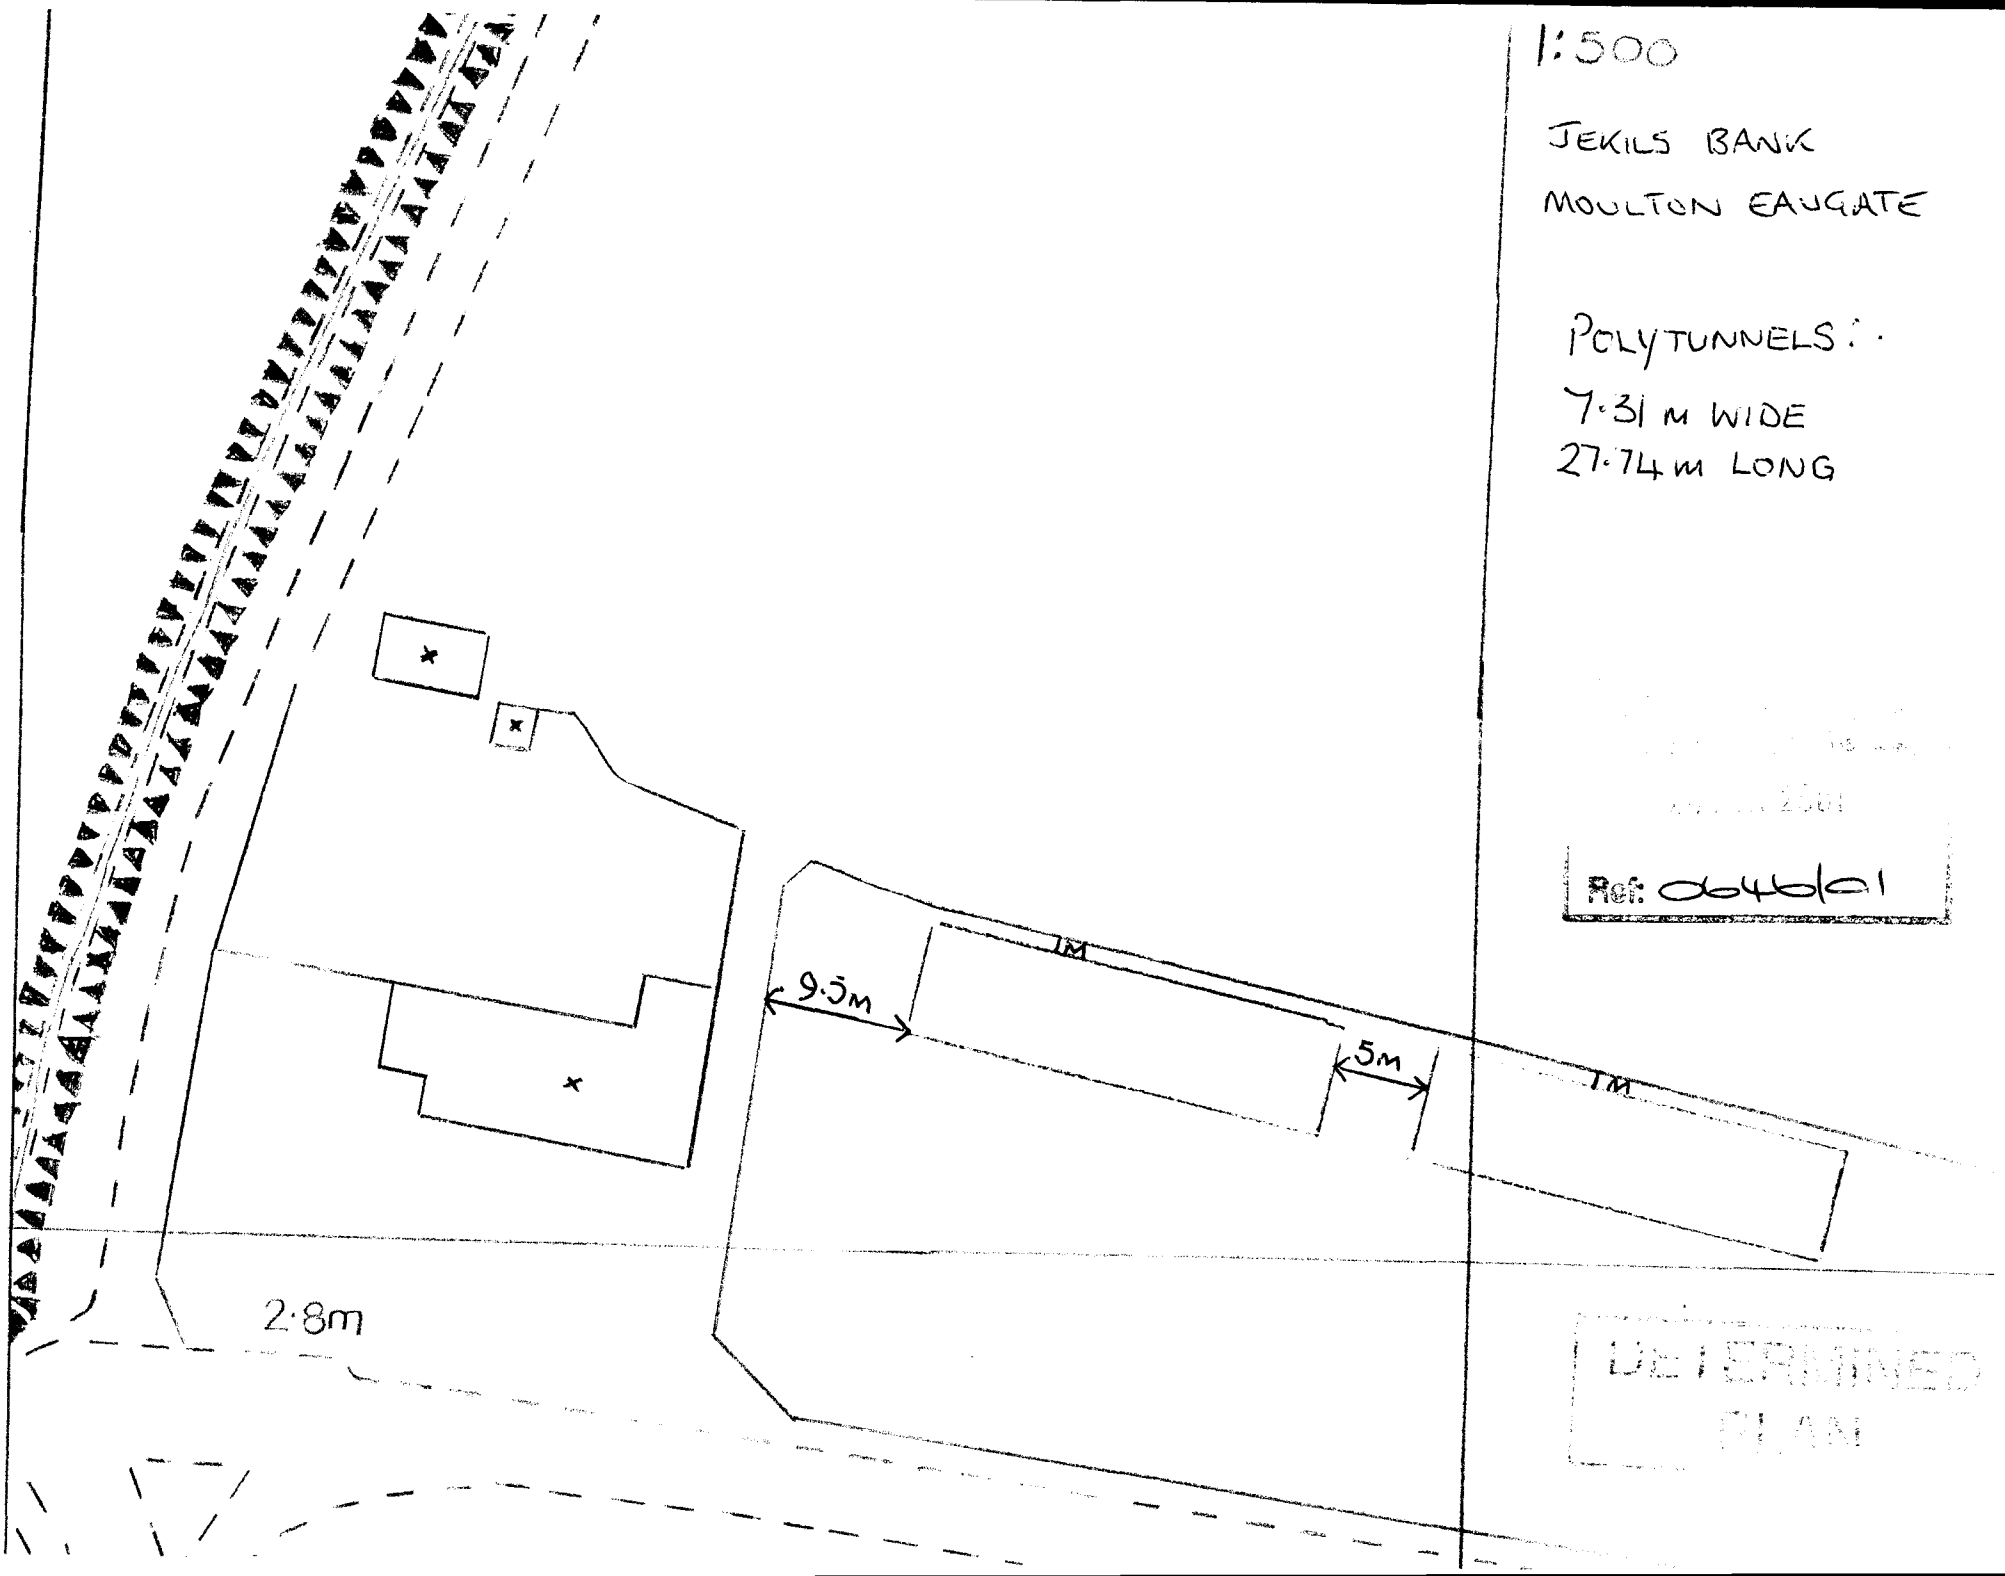

Structure Length (7ft (2.13m) hoop spacings)	Framework Price	Anti Hot Spot Tape*
